Fostering Palliative Care of Adults and Children with Cancer through Advanced Patient Reported Outcome Systems

@H2020MyPal

@MyPalProject

Funded by the Horizon
2020 Framework
Programme of the
European Union under
Grant Agreement no
825872

 <https://mypal-project.eu/>

What is MyPal about?

MyPal will develop and test innovative digital technologies – apps and games – applied to patient reported outcome (PRO) systems for patients with cancer receiving palliative care.

The study will focus on two different patient groups:

- Adults with haematological malignancies
- Children with solid tumours or haematological malignancies

Patients (or family members acting on their behalf) will be able to report real-time changes in their condition directly to their healthcare professionals, enabling a more effective response from their healthcare provider.

Who is doing the work?

16 partners from
7 European Countries

“MyPal reflects a paradigm shift from passive patient reporting (through conventional PRO approaches) to active patient engagement (via personalised and integrated care delivery) across the entire cancer trajectory.”

Vassilis Koutkias
(MyPal Coordinator, CERTH)

MyPal Objectives

1. Design a comprehensive, patient-centred intervention for palliative care.
2. Reduce symptom burden for cancer patients in need of palliative care.
3. Reinforce patient participation and empowerment in palliative care.
4. Provide novel tools for advancing electronic patient reported outcome (ePRO) systems.
5. Reinforce the evidence-base of the effectiveness and cost-effectiveness of ePRO for palliative care for cancer patients.
6. Prove the feasibility of integrating the proposed intervention in palliative care regimes and healthcare systems across Europe.
